

Session 1

1. What is a Program? Give one real-life example.

A **program** is a set of instructions written in a programming language that tells a computer or mobile device what to do. It helps perform specific tasks automatically and correctly.

Example: When I use **Instagram**, the program shows my feed, lets me like posts, upload photos, and send messages.

2. Three Popular Programming Languages

Programming Language	Type
Java	Compiled (into bytecode, then run on the JVM)
Python	Interpreted
JavaScript	Interpreted (modern engines also use Just-In-Time compilation)

3. Flowchart for Booking a Movie Ticket on BookMyShow

(You can draw the same flowchart on paper using boxes and arrows.)

4. Algorithm for Ordering Food on Swiggy

Algorithm:

1. Start.
2. Open the Swiggy app.
3. Log in to your account.
4. Select or confirm your delivery location.
5. Search for a restaurant.
6. Choose the food items you want.
7. Add the selected items to the cart.
8. Review your order.
9. Proceed to checkout.
10. Select a payment method.
11. Complete the payment.
12. Receive order confirmation.
13. End.
