

Session:2

1. What are the three main layers of software architecture? Write one line about each.

- Presentation Layer (UI) – Handles user interaction and displays information to users.
- Business Logic Layer – Processes data and implements application rules.
- Database Layer – Stores, retrieves, and manages application data.

2. Define client and server in your own words with one real-life example.

- Client – A device or application that requests services or data.
- Server – A system that provides services or data to clients.

Example: When you open a website in Google Chrome, your browser is the client and the website's hosting computer is the server.

3. Write 2 differences each between desktop apps, web apps, and mobile apps.

Desktop Apps | Web Apps | Mobile Apps

Installed on a computer | Run in a web browser | Installed on a smartphone/tablet

Can work without internet | Usually require internet | Can use phone features like camera and GPS

4. Name any 3 databases and mention whether each is SQL or NoSQL.

- MySQL – SQL Database
- PostgreSQL – SQL Database
- MongoDB – NoSQL Database
