

JavaScript Playlist & Link Management — Answers

The repeated questions are answered separately as requested. You can copy each snippet into your JavaScript file.

1. Add a playlist link to myLinks

Answer:

```
function addPlaylistLink(linkObj) {
  const links = JSON.parse(localStorage.getItem("myLinks")) || [];
  links.push(linkObj);
  localStorage.setItem("myLinks", JSON.stringify(links));
}

// Example:
// addPlaylistLink({ name: "My Spotify Playlist", url: "https://spotify.com/..." });
```

2. Add a playlist link to myLinks

Answer:

```
function addPlaylistLink(linkObj) {
  const links = JSON.parse(localStorage.getItem("myLinks")) || [];
  links.push(linkObj);
  localStorage.setItem("myLinks", JSON.stringify(links));
}
```

3. Add a playlist with name and URL to myPlaylists

Answer:

```
function addPlaylistLink(linkObj) {
  const playlists = JSON.parse(localStorage.getItem("myPlaylists")) || [];

  playlists.push({
    name: linkObj.name,
    url: linkObj.url
  });

  localStorage.setItem("myPlaylists", JSON.stringify(playlists));
}

// Example:
// addPlaylistLink({ name: "Workout Music", url: "https://youtube.com/..." });
```

4. Validate that a URL starts with https:// and contains a dot

Answer:

```
function validateURL(url) {
  return url.startsWith("https://") && url.includes(".");
}

// Example:
// validateURL("https://example.com"); // true
// validateURL("http://example.com"); // false
```

5. Validate that a URL starts with https:// and contains a dot

Answer:

```
function validateURL(url) {
  return url.startsWith("https://") && url.includes(".");
}
```

6. Edit a playlist link and persist it

Answer:

```
function editPlaylistLink(index, newLinkObj) {
  const playlists = JSON.parse(localStorage.getItem("myPlaylists")) || [];

  if (index >= 0 && index < playlists.length) {
```

```

    playlists[index] = {
      name: newLinkObj.name,
      url: newLinkObj.url
    };

    localStorage.setItem("myPlaylists", JSON.stringify(playlists));
  }
}

```

7. Toggle light/dark theme and save the theme

Answer:

```

function toggleTheme() {
  document.body.classList.toggle("dark-mode");

  const theme = document.body.classList.contains("dark-mode")
    ? "dark"
    : "light";

  localStorage.setItem("theme", theme);
}

```

8. Toggle light/dark theme and save the theme

Answer:

```

function toggleTheme() {
  document.body.classList.toggle("dark-mode");

  const theme = document.body.classList.contains("dark-mode")
    ? "dark"
    : "light";

  localStorage.setItem("theme", theme);
}

```

9. Delete a playlist link and update LocalStorage

Answer:

```

function deletePlaylistLink(index) {
  const playlists = JSON.parse(localStorage.getItem("myPlaylists")) || [];

  if (index >= 0 && index < playlists.length) {
    playlists.splice(index, 1);
    localStorage.setItem("myPlaylists", JSON.stringify(playlists));
  }
}

```

10. Reusable manageLink(linkObj, mode) function

Answer:

```

function manageLink(linkObj, mode) {
  const playlists = JSON.parse(localStorage.getItem("myPlaylists")) || [];

  if (mode === "add") {
    playlists.push({
      name: linkObj.name,
      url: linkObj.url
    });
  } else if (mode === "edit") {
    const index = linkObj.index;

    if (index >= 0 && index < playlists.length) {
      playlists[index] = {
        name: linkObj.name,
        url: linkObj.url
      };
    }
  }
}

// One LocalStorage update for both modes.

```

```

localStorage.setItem("myPlaylists", JSON.stringify(playlists));
}

// Add:
// manageLink({ name: "Study Music", url: "https://spotify.com/..." }, "add");

// Edit:
// manageLink({ index: 0, name: "Updated Music",
//             url: "https://youtube.com/..." }, "edit");

```

11. Reusable manageLink(linkObj, mode) function

Answer:

```

function manageLink(linkObj, mode) {
  const playlists = JSON.parse(localStorage.getItem("myPlaylists")) || [];

  if (mode === "add") {
    playlists.push({ name: linkObj.name, url: linkObj.url });
  } else if (mode === "edit") {
    if (linkObj.index >= 0 && linkObj.index < playlists.length) {
      playlists[linkObj.index] = {
        name: linkObj.name,
        url: linkObj.url
      };
    }
  }

  localStorage.setItem("myPlaylists", JSON.stringify(playlists));
}

```

12. Toggle theme and apply saved mode on next visit

Answer:

```

function toggleTheme() {
  document.body.classList.toggle("dark-mode");

  const theme = document.body.classList.contains("dark-mode")
    ? "dark"
    : "light";

  localStorage.setItem("theme", theme);
}

document.addEventListener("DOMContentLoaded", () => {
  const savedTheme = localStorage.getItem("theme");

  if (savedTheme === "dark") {
    document.body.classList.add("dark-mode");
  } else {
    document.body.classList.remove("dark-mode");
  }
});

```

13. Invalid Instagram URL error below the input

Answer:

```

const instagramInput = document.getElementById("instagramUrl");
const instagramError = document.getElementById("instagramError");

function validateInstagramURL() {
  const url = instagramInput.value.trim();

  const valid =
    url.startsWith("https://") &&
    url.includes("instagram.com/");

  if (!valid) {
    instagramError.textContent = "Please enter a valid Instagram profile URL.";
  } else {
    instagramError.textContent = "";
  }
}

```

```

}

instagramInput.addEventListener("input", validateInstagramURL);

```

14. Invalid Instagram URL error below the input

Answer:

```

const input = document.getElementById("instagramUrl");
const error = document.getElementById("instagramError");

input.addEventListener("input", () => {
  const valid = input.value.startsWith("https://") &&
    input.value.includes("instagram.com/");

  error.textContent = valid
    ? ""
    : "Invalid Instagram profile URL.";
});

```

15. Validate Spotify/YouTube playlist URL and show an error below the input

Answer:

```

function validateLink(url) {
  return url.startsWith("https://") &&
    (url.includes("spotify.com") || url.includes("youtube.com"));
}

const playlistInput = document.getElementById("playlistUrl");
const playlistError = document.getElementById("playlistError");

playlistInput.addEventListener("input", () => {
  if (!validateLink(playlistInput.value.trim())) {
    playlistError.textContent =
      "Please enter a valid Spotify or YouTube URL.";
  } else {
    playlistError.textContent = "";
  }
});

```

Integration for Tasks 13–14

Add an input with id `instagramUrl` and an empty element such as `<p id="instagramError"></p>` directly below it. Then place the JavaScript after the HTML elements exist (or inside `DOMContentLoaded`) so the event listener can find them.

Example HTML for Tasks 13–15

```

<input id="playlistUrl" type="url" placeholder="Enter playlist URL">
<p id="playlistError"></p>

<input id="instagramUrl" type="url" placeholder="Enter Instagram URL">
<p id="instagramError"></p>

```
