

HTML & JavaScript Tasks – Answers 1 to 12

Ready-to-copy solutions for VS Code / Live Server

Task 1 – welcome.html alert

```
<!DOCTYPE html>
<html>
<head>
  <title>Welcome</title>
</head>
<body>
  <h1>Playlist Builder</h1>

  <script>
    alert('Welcome to your Playlist Builder!');
  </script>
</body>
</html>
```

Save this code as welcome.html. Open it in a browser. The alert appears when the page loads.

Task 2 – welcome.html alert (same task)

```
<!DOCTYPE html>
<html>
<head>
  <title>Welcome</title>
</head>
<body>
  <h1>Playlist Builder</h1>

  <script>
    alert('Welcome to your Playlist Builder!');
  </script>
</body>
</html>
```

Task 2 is identical to Task 1, so the same code can be used.

Task 3 – insta-bio.html alert

```
<!DOCTYPE html>
<html>
<head>
  <title>Insta Bio-Link</title>
</head>
<body>
  <h1>My Insta Bio-Link Page</h1>

  <script>
    alert('Welcome to your Insta Bio-Link Page!');
  </script>
</body>
</html>
```

Save this file as insta-bio.html and open it. The alert appears on page load.

Task 4 – Chrome DevTools console

Steps:

1. Open Chrome and visit a website such as Instagram or Zomato.

2. Right-click the page and select Inspect.
3. Open the Console tab.
4. Type:

```
console.log('Hello from the console!');
```

5. Press Enter.
6. You should see: Hello from the console!

Note: Chrome may display a warning about pasting code into the Console. Only paste code you understand.

Task 5 – Chrome DevTools console (same task)

Steps:

1. Open Chrome and visit Instagram or Zomato.
2. Right-click → Inspect.
3. Select the Console tab.
4. Type:

```
console.log('Hello from the console!');
```

5. Press Enter and check the output.

Task 5 is identical to Task 4.

Task 6 – JavaScript console test

Steps:

1. Open Chrome and visit Zomato or Flipkart.
2. Right-click → Inspect.
3. Select Console.
4. Type:

```
console.log('JS is running!');
```

5. Press Enter.
6. The Console should display: JS is running!

Use the Console to quickly test JavaScript statements.

Task 7 – Show Bio button

```
<!DOCTYPE html>
<html>
<head>
  <title>Show Bio</title>
</head>
<body>
  <button id="showBio">Show Bio</button>

  <script>
    document.querySelector('#showBio').addEventListener('click', function() {
      alert('My name is Divy. My favorite app is Instagram.');
```

Replace the name and favorite app in the alert with your own details if required.

Task 8 – Show Bio button (same task)

```
<!DOCTYPE html>
```

```

<html>
<head>
  <title>Show Bio</title>
</head>
<body>
  <button id="showBio">Show Bio</button>

  <script>
    document.querySelector('#showBio').addEventListener('click', function() {
      alert('My name is Divy. My favorite app is Instagram.');
```

Task 8 is identical to Task 7.

Task 9 – Show Greeting button

```

<!DOCTYPE html>
<html>
<head>
  <title>Insta Bio</title>
</head>
<body>
  <h1>My Insta Bio-Link Page</h1>

  <button id="showGreeting">Show Greeting</button>

  <script>
    document.querySelector('#showGreeting').addEventListener('click', function() {
      alert('Hello from JS!');
```

The button is selected with `document.querySelector()`, and `addEventListener()` runs the alert when it is clicked.

Task 10 – Change heading color to green

```

<!DOCTYPE html>
<html>
<head>
  <title>Food Apps</title>
</head>
<body>
  <h2>Top 3 Food Apps</h2>

  <script>
    document.querySelector('h2').style.color = 'green';
  </script>
</body>
</html>
```

When the page loads, JavaScript selects the `h2` element and changes its text color to green.

Task 11 – Change heading color to green (same task)

```

<!DOCTYPE html>
<html>
<head>
  <title>Food Apps</title>
</head>
```

```
<body>
  <h2>Top 3 Food Apps</h2>

  <script>
    document.querySelector('h2').style.color = 'green';
  </script>
</body>
</html>
```

Task 11 is identical to Task 10.

Task 12 – Live Server and personalized alert

```
<!DOCTYPE html>
<html>
<head>
  <title>Insta Bio</title>
</head>
<body>
  <h1>My Insta Bio-Link Page</h1>

  <script>
    alert('Welcome to Divy\'s Insta Bio-Link Page!');
  </script>
</body>
</html>
```

VS Code steps:

1. Save the file as insta-bio.html.
2. Install the Live Server extension if it is not installed.
3. Right-click insta-bio.html.
4. Select “Open with Live Server”.
5. The page opens in Chrome.
6. Change the name in the alert message if needed.
7. Save the file (Ctrl + S).
8. Refresh the browser to see the updated alert.
