Solutions for filter(), map(), reduce(), and find() tasks

Note: Questions 1–15 are answered in order. Repeated questions intentionally use the same solution.

1. Filter Flipkart products to keep only products that are in stock.

```
const inStockProducts = products.filter(product => product.isInStock);
console.log(inStockProducts);
```

2. Filter Flipkart products to keep only products that are in stock.

```
const inStockProducts = products.filter(product => product.isInStock);
console.log(inStockProducts);
```

3. Filter Spotify-style playlists to keep only public playlists.

```
const publicPlaylists = playlists.filter(playlist => playlist.isPublic);
console.log(publicPlaylists);
```

4. Map Instagram posts into an array containing only their like counts.

```
const likeCounts = posts.map(post => post.likes);
console.log(likeCounts);
```

5. Map Instagram posts into an array containing only their like counts.

```
const likeCounts = posts.map(post => post.likes);
console.log(likeCounts);
```

6. Map Flipkart products into strings formatted as 'Product: [name], Price: ■[price]'.

```
const productDetails = products.map(
  product => `Product: ${product.name}, Price: ■${product.price}`
);

console.log(productDetails);
```

7. Reduce Zomato orders to calculate the total number of clicks.

```
const totalClicks = orders.reduce(
  (total, order) => total + order.clicks,
  0
);

console.log(totalClicks);
```

8. Reduce Zomato orders to calculate the total number of clicks.

```
const totalClicks = orders.reduce(
  (total, order) => total + order.clicks,
  0
);

console.log(totalClicks);
```

9. Reduce Instagram posts to calculate the total number of likes.

```
const totalLikes = posts.reduce(
  (total, post) => total + post.likes,
  0
);

console.log(totalLikes);
```

10. Find the first YouTube video with more than 1 million views.

```
const popularVideo = videos.find(video => video.views > 1000000);
```

```
console.log(popularVideo);
```

11. Find the first YouTube video with more than 1 million views.

```
const popularVideo = videos.find(video => video.views > 1000000);  
console.log(popularVideo);
```

12. Find the first Zomato restaurant that serves Chinese cuisine.

```
const chineseRestaurant = restaurants.find(  
  restaurant => restaurant.cuisine === "Chinese"  
);  
  
console.log(chineseRestaurant);
```

13. Use a map() + reduce() one-liner to calculate the sum of all prices in Myntra cart items.

```
const totalPrice = cartItems.map(item => item.price).reduce((sum, price) => sum + price, 0);  
console.log(totalPrice);
```

14. Use a map() + reduce() one-liner to calculate the sum of all prices in Myntra cart items.

```
const totalPrice = cartItems.map(item => item.price).reduce((sum, price) => sum + price, 0);  
console.log(totalPrice);
```

15. Use a map() + reduce() one-liner to calculate the total amount spent from transactions.

```
const totalSpent = transactions.map(transaction => transaction.amount).reduce((sum, amount) => sum + amount, 0);  
console.log(totalSpent);
```

Key methods: filter() returns matching elements, map() transforms every element, reduce() combines elements into one result, and find() returns the first matching element.
