

HTML & JavaScript DOM Tasks — Answers

Complete solutions for Tasks 1–12. Each example is a standalone HTML file and can be copied into a .html file and opened in a browser.

Task 1

Set the greeting div using getElementById and innerHTML.

```
<!DOCTYPE html>
<html>
<head><title>IPL Fan Zone</title></head>
<body>
  <div id="greeting"></div>

  <script>
    const greeting = document.getElementById("greeting");
    greeting.innerHTML = "Welcome to the IPL Fan Zone!";
  </script>
</body>
</html>
```

Task 2

Set the greeting div using getElementById and innerHTML.

```
<!DOCTYPE html>
<html>
<head><title>IPL Fan Zone</title></head>
<body>
  <div id="greeting"></div>

  <script>
    const greeting = document.getElementById("greeting");
    greeting.innerHTML = "Welcome to the IPL Fan Zone!";
  </script>
</body>
</html>
```

Task 3

Set the greeting div to the requested playlist welcome message.

```
<!DOCTYPE html>
<html>
<head><title>Playlist</title></head>
<body>
  <div id="greeting"></div>

  <script>
    const greeting = document.getElementById("greeting");
    greeting.innerHTML = "Hello, welcome to your playlist!";
  </script>
</body>
</html>
```

Task 4

Add a song to the playlist using querySelector and dynamically create a new li element.

```
<!DOCTYPE html>
<html>
<head><title>Playlist</title></head>
<body>
  <h2>My Playlist</h2>
  <input type="text" id="songInput" placeholder="Enter song name">
```

```

<button id="addSong">Add Song</button>
<ul id="playlist"></ul>

<script>
    document.getElementById("addSong").addEventListener("click", function () {
        const songInput = document.querySelector("#songInput");
        const songName = songInput.value.trim();

        if (songName !== "") {
            const li = document.createElement("li");
            li.innerHTML = songName;
            document.querySelector("#playlist").appendChild(li);
            songInput.value = "";
        }
    });
</script>
</body>
</html>

```

Task 5

Add a song to the playlist using `querySelector` and dynamically create a new `li` element.

```

<!DOCTYPE html>
<html>
<head><title>Playlist</title></head>
<body>
    <h2>My Playlist</h2>
    <input type="text" id="songInput" placeholder="Enter song name">
    <button id="addSong">Add Song</button>
    <ul id="playlist"></ul>

    <script>
        document.getElementById("addSong").addEventListener("click", function () {
            const songInput = document.querySelector("#songInput");
            const songName = songInput.value.trim();

            if (songName !== "") {
                const li = document.createElement("li");
                li.innerHTML = songName;
                document.querySelector("#playlist").appendChild(li);
                songInput.value = "";
            }
        });
    </script>
</body>
</html>

```

Task 6

Add a friend's name to the friend list using `querySelector` and a dynamically created `li` element.

```

<!DOCTYPE html>
<html>
<head><title>Friend List</title></head>
<body>
    <h2>My Friends</h2>
    <input type="text" id="friendInput" placeholder="Enter friend's name">
    <button id="addFriend">Add Friend</button>
    <ul id="friend-list"></ul>

    <script>
        document.getElementById("addFriend").addEventListener("click", function () {
            const friendInput = document.querySelector("#friendInput");
            const friendName = friendInput.value.trim();

            if (friendName !== "") {
                const li = document.createElement("li");
                li.innerHTML = friendName;
                document.querySelector("#friend-list").appendChild(li);
                friendInput.value = "";
            }
        });
    </script>
</body>
</html>

```

```

    }
  });
</script>
</body>
</html>

```

Task 7

Change the offer heading text and make it red using the style property.

```

<!DOCTYPE html>
<html>
<head><title>Zomato Offer</title></head>
<body>
  <h2 id="offer">Today's Special Offer</h2>

  <script>
    const offer = document.getElementById("offer");
    offer.innerHTML = "Flat 50% Off on Zomato Today!";
    offer.style.color = "red";
  </script>
</body>
</html>

```

Task 8

Change the offer heading text and make it red using the style property.

```

<!DOCTYPE html>
<html>
<head><title>Zomato Offer</title></head>
<body>
  <h2 id="offer">Today's Special Offer</h2>

  <script>
    const offer = document.getElementById("offer");
    offer.innerHTML = "Flat 50% Off on Zomato Today!";
    offer.style.color = "red";
  </script>
</body>
</html>

```

Task 9

Create a Dark Mode button that changes the page background and button text.

```

<!DOCTYPE html>
<html>
<head><title>Dark Mode Toggle</title></head>
<body>
  <h2>Dark Mode Example</h2>
  <button id="modeButton">Dark Mode</button>

  <script>
    const button = document.getElementById("modeButton");

    button.addEventListener("click", function () {
      document.body.style.backgroundColor = "black";
      document.body.style.color = "white";
      button.innerHTML = "Light Mode";
    });
  </script>
</body>
</html>

```

Task 10

Update the mood box background in real time as the user types a color.

```

<!DOCTYPE html>
<html>
<head><title>Mood Box</title></head>
<body>
  <h2>Choose a Color</h2>
  <input type="text" id="colorInput" placeholder="Type pink, yellow, etc.">
  <div id="moodbox"
    style="width:200px; height:100px; margin-top:10px; border:1px solid black;">
  </div>

  <script>
    const colorInput = document.querySelector("#colorInput");
    const moodbox = document.getElementById("moodbox");

    colorInput.addEventListener("input", function () {
      moodbox.style.backgroundColor = colorInput.value;
    });
  </script>
</body>
</html>

```

Task 11

Update the mood box background in real time as the user types a color.

```

<!DOCTYPE html>
<html>
<head><title>Mood Box</title></head>
<body>
  <h2>Choose a Color</h2>
  <input type="text" id="colorInput" placeholder="Type pink, yellow, etc.">
  <div id="moodbox"
    style="width:200px; height:100px; margin-top:10px; border:1px solid black;">
  </div>

  <script>
    const colorInput = document.querySelector("#colorInput");
    const moodbox = document.getElementById("moodbox");

    colorInput.addEventListener("input", function () {
      moodbox.style.backgroundColor = colorInput.value;
    });
  </script>
</body>
</html>

```

Task 12

Create a mini Now Playing display with a predefined array of songs.

```

<!DOCTYPE html>
<html>
<head><title>Now Playing</title></head>
<body>
  <h2>Now Playing</h2>
  <p>Song: <span id="song-title">Blinding Lights</span></p>
  <button id="changeSong">Change Song</button>

  <script>
    const songs = [
      "Shape of You",
      "Blinding Lights",
      "Perfect",
      "Levitating",
      "Believer"
    ];

    let currentSong = 0;

    document.getElementById("changeSong").addEventListener("click", function () {
      currentSong = (currentSong + 1) % songs.length;
    });
  </script>

```

```
        document.getElementById("song-title").innerHTML = songs[currentSong];
    });
</script>
</body>
</html>
```
